

Abstract of the Disclosure

A floor care cleaning apparatus includes a nozzle assembly including a housing defining an agitator cavity. A canister assembly is connected to the nozzle assembly. A suction generator is carried by either the nozzle assembly or the canister assembly. A dirt collection vessel is also carried by one of these assemblies. In addition, an agitator cavity fitting is carried by the nozzle assembly. The agitator cavity fitting includes a cooperating air guide and conduit. The conduit defines an intake port of the floor cleaning apparatus.
